

## 1    **ABSTRACT OF THE DISCLOSURE**

2            A combination of dual mobile phone chargers has a housing and a plug  
3    removably received in the housing. The housing has a space defined in the housing to  
4    snugly yet securely receive therein the plug, a positioning cutout defined in a distal end  
5    of the housing and having first contacting plates formed on a bottom face defining the  
6    positioning cutout, a printed circuit board securely received in a bottom face defining  
7    the space and second contacting plates extending out of a side wall of the housing and  
8    engaging with the printed circuit board for connection with a wall outlet. The plug has a  
9    contacting point on a first distal end of the plug for connection with a power source, a  
10   locating cutout oppositely defined relative to the contacting point and third contacting  
11   plates formed on a bottom face defining the locating cutout.
